

## HOW TO USE THIS INSTALL GUIDE

- 1** Open the Bookmarks menu and find your vehicle OR scroll down until you find the install guide for your vehicle.
- 2** Print only the pages for your vehicle using the advanced options in the Print menu.
- 3** Install your Maestro RR according to the guide for your vehicle.

## WARNING

Pressing the printer icon or “quick printing” this document will print all of the guides in this compilation.

# WELCOME

Congratulations on the purchase of your iDatalink Maestro RR Radio replacement solution. You are now a few simple steps away from enjoying your new car radio with enhanced features.

Before starting your installation, please ensure that your iDatalink Maestro module is programmed with the correct firmware for your vehicle and that you carefully review the install guide.

**Please note that Maestro RR will only retain functionalities that were originally available in the vehicle.**

Troubleshooting Table	7

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue, green and red 2-pin connectors are not used.

## STEP 4

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 5

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 6

- Connect all the harnesses to the Maestro RR module then test your installation.

# TROUBLESHOOTING TABLE

PROBLEM	SOLUTION
Gauges do not work, radio shows OBD2 Error 1 or Error 2.	<p>Ensure OBDII connector is securely attached to the OBDII connector of the vehicle.</p> <p>If you hardwired connections at the OBDII, check connections at the OBDII connector. Make sure the <b>RED/BROWN</b> wire is on <b>PIN 6</b> and the <b>YELLOW/BROWN</b> wire is connected to <b>PIN 14</b> of the OBDII connector. Do not use T-Taps. Soldering or military splicing methods are recommended.</p> <p>If anything else is connected to the OBD2 or CAN wires of vehicle (programmer, throttle controller, insurance tracker, etc.) try unplugging it to see if gauges work. If gauges work without it installed, call tech support for options.</p> <p>Reset the RR.</p>
Backup camera is not displayed.	<p>If radio doesn't switch to camera input, ensure purple/white from the MA1 harness is connected to radio reverse input wire.</p> <p>If radio switches to blank image, verify yellow "BACK UP CAMERA" RCA is connected to the correct input. Most radios have a yellow "R CAM" or "CAM" input. Pioneer models may use a brown "BC IN" input. Make sure the 2-pin white connector is plugged into the MA1 T harness.</p>
Audio is very quiet or very loud.	<p><b>Non-amplified vehicles</b>, ensure the white and black 4-pin connectors remain plugged in together in the harness. The 4-pin RCA adapters are not used.</p> <p><b>Amplified vehicles</b>, ensure the 4-pin RCA connectors are used after separating the white and black 4-pin connectors on the MA1 harness. Plug them into the radio's RCA preouts.</p>
The light on the Maestro is flashing <b>RED ONCE</b> .	<p>There is no firmware on the module. Flash the RR module using Weblink Desktop and log in. Do NOT use DEMO MODE.</p>
The light on the Maestro is blinking <b>RED TWICE</b> and the radio <b>IS</b> turning on.	<p>Ensure the 4-pin data cable is connected between the radio and the RR, and that it is plugged into the black port on the Maestro RR. The red and blue ports on the RR should be empty.</p> <p>Make sure the correct radio model and serial number were entered during the flash. Verify the radio's serial number entered during the flash matches what is listed on the radio screen. This can be found in the settings of the radio, listed as Device Id, Device Number, or Serial Number.</p>
The light on the Maestro is blinking <b>RED TWICE</b> but the radio is <b>NOT</b> turning on.	<p>If installing a modular radio and it is not turning on, ensure the screen is secured and any trim pieces on the radio have been installed fully. Not installing these fully will prevent radio from powering up and show a 2x red error as well.</p> <p>Test red and yellow wires for DC voltage at radio using a multimeter. Contact support if no voltage on red or yellow.</p>

## MAESTRO RR RESET PROCEDURE:

Turn the key to the OFF position, then disconnect all connectors from the module.

Press and hold the module's programming button and connect all the connectors back to the module. Wait, the module's LED will flash RED rapidly (this may take up to 10 seconds).

Release the programming button. Wait, the LED will turn solid GREEN for 2 seconds to show the reset was successful.

 [maestro.support@idatalink.com](mailto:maestro.support@idatalink.com)

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue 2-pin connector is not used.

## STEP 4

- Plug the HRR-MA1 red connector to the green 2-pin connector.
- Cut and isolate the blue/red wire near the 24-pin connector. Connect the other end of the blue/red wire to PIN-F of the 28-pin Bluetooth module connector (refer to wiring diagram for details).

## STEP 5

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 6

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 7

- Connect all the harnesses to the Maestro RR module then test your installation.

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue, green and red 2-pin connectors are not used.

## STEP 4

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 5

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

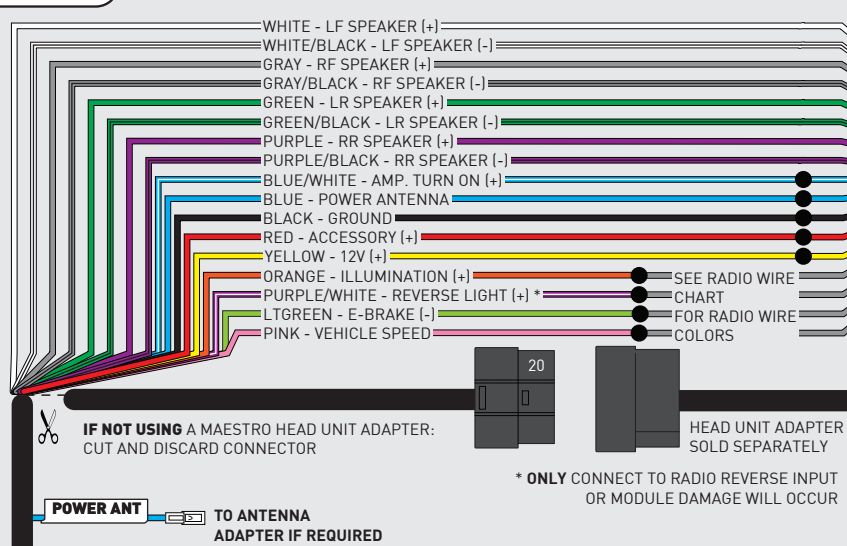

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 6

- Connect all the harnesses to the Maestro RR module then test your installation.

# TROUBLESHOOTING TABLE

PROBLEM	SOLUTION
Gauges do not work, radio shows OBD2 Error 1 or Error 2.	<p>Ensure OBDII connector is securely attached to the OBDII connector of the vehicle.</p> <p>If you hardwired connections at the OBDII, check connections at the OBDII connector. Make sure the <b>RED/BROWN</b> wire is on <b>PIN 6</b> and the <b>YELLOW/BROWN</b> wire is connected to <b>PIN 14</b> of the OBDII connector. Do not use T-Taps. Soldering or military splicing methods are recommended.</p> <p>If anything else is connected to the OBD2 or CAN wires of vehicle (programmer, throttle controller, insurance tracker, etc.) try unplugging it to see if gauges work. If gauges work without it installed, call tech support for options.</p> <p>Reset the RR.</p>
Backup camera is not displayed.	<p>If radio doesn't switch to camera input, ensure purple/white from the MA1 harness is connected to radio reverse input wire.</p> <p>If radio switches to blank image, verify yellow "BACK UP CAMERA" RCA is connected to the correct input. Most radios have a yellow "R CAM" or "CAM" input. Pioneer models may use a brown "BC IN" input. Make sure the 2-pin white connector is plugged into the MA1 T harness.</p>
Audio is very quiet or very loud.	<p><b>Non-amplified vehicles</b>, ensure the white and black 4-pin connectors remain plugged in together in the harness. The 4-pin RCA adapters are not used.</p> <p><b>Amplified vehicles</b>, ensure the 4-pin RCA connectors are used after separating the white and black 4-pin connectors on the MA1 harness. Plug them into the radio's RCA preouts.</p>
The light on the Maestro is flashing <b>RED ONCE</b> .	<p>There is no firmware on the module. Flash the RR module using Weblink Desktop and log in. Do NOT use DEMO MODE.</p>
The light on the Maestro is blinking <b>RED TWICE</b> and the radio <b>IS</b> turning on.	<p>Ensure the 4-pin data cable is connected between the radio and the RR, and that it is plugged into the black port on the Maestro RR. The red and blue ports on the RR should be empty.</p> <p>Make sure the correct radio model and serial number were entered during the flash. Verify the radio's serial number entered during the flash matches what is listed on the radio screen. This can be found in the settings of the radio, listed as Device Id, Device Number, or Serial Number.</p>
The light on the Maestro is blinking <b>RED TWICE</b> but the radio is <b>NOT</b> turning on.	<p>If installing a modular radio and it is not turning on, ensure the screen is secured and any trim pieces on the radio have been installed fully. Not installing these fully will prevent radio from powering up and show a 2x red error as well.</p> <p>Test red and yellow wires for DC voltage at radio using a multimeter. Contact support if no voltage on red or yellow.</p>

## MAESTRO RR RESET PROCEDURE:

Turn the key to the OFF position, then disconnect all connectors from the module.

Press and hold the module's programming button and connect all the connectors back to the module. Wait, the module's LED will flash RED rapidly (this may take up to 10 seconds).

Release the programming button. Wait, the LED will turn solid GREEN for 2 seconds to show the reset was successful.

# WELCOME

Congratulations on the purchase of your iDatalink Maestro RR Radio replacement solution. You are now a few simple steps away from enjoying your new car radio with enhanced features.

Before starting your installation, please ensure that your iDatalink Maestro module is programmed with the correct firmware for your vehicle and that you carefully review the install guide.

**Please note that Maestro RR will only retain functionalities that were originally available in the vehicle.**

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue 2-pin connector is not used.

## STEP 4

- Plug the HRR-MA1 red connector to the green 2-pin connector.
- Cut and isolate the blue/red wire near the 24-pin connector. Connect the other end of the blue/red wire to PIN-F of the 28-pin Bluetooth module connector (refer to wiring diagram for details).

## STEP 5

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 6

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 7

- Connect all the harnesses to the Maestro RR module then test your installation.

# TROUBLESHOOTING TABLE

PROBLEM	SOLUTION
Gauges do not work, radio shows OBD2 Error 1 or Error 2.	Ensure OBDII connector is securely attached to the OBDII connector of the vehicle. If you hardwired connections at the OBDII, check connections at the OBDII connector. Make sure the <b>RED/BROWN</b> wire is on <b>PIN 6</b> and the <b>YELLOW/BROWN</b> wire is connected to <b>PIN 14</b> of the OBDII connector. Do not use T-Taps. Soldering or military splicing methods are recommended. If anything else is connected to the OBD2 or CAN wires of vehicle (programmer, throttle controller, insurance tracker, etc.) try unplugging it to see if gauges work. If gauges work without it installed, call tech support for options. Reset the RR.
Backup camera is not displayed.	If radio doesn't switch to camera input, ensure purple/white from the MA1 harness is connected to radio reverse input wire. If radio switches to blank image, verify yellow "BACK UP CAMERA" RCA is connected to the correct input. Most radios have a yellow "R CAM" or "CAM" input. Pioneer models may use a brown "BC IN" input. Make sure the 2-pin white connector is plugged into the MA1 T harness.
Audio is very quiet or very loud.	<b>Non-amplified vehicles</b> , ensure the white and black 4-pin connectors remain plugged in together in the harness. The 4-pin RCA adapters are not used. <b>Amplified vehicles</b> , ensure the 4-pin RCA connectors are used after separating the white and black 4-pin connectors on the MA1 harness. Plug them into the radio's RCA preouts.
The light on the Maestro is flashing <b>RED ONCE</b> .	There is no firmware on the module. Flash the RR module using Weblink Desktop and log in. Do NOT use DEMO MODE.
The light on the Maestro is blinking <b>RED TWICE</b> and the radio <b>IS</b> turning on.	Ensure the 4-pin data cable is connected between the radio and the RR, and that it is plugged into the black port on the Maestro RR. The red and blue ports on the RR should be empty.  Make sure the correct radio model and serial number were entered during the flash. Verify the radio's serial number entered during the flash matches what is listed on the radio screen. This can be found in the settings of the radio, listed as Device Id, Device Number, or Serial Number.
The light on the Maestro is blinking <b>RED TWICE</b> but the radio is <b>NOT</b> turning on.	If installing a modular radio and it is not turning on, ensure the screen is secured and any trim pieces on the radio have been installed fully. Not installing these fully will prevent radio from powering up and show a 2x red error as well. Test red and yellow wires for DC voltage at radio using a multimeter. Contact support if no voltage on red or yellow.

## MAESTRO RR RESET PROCEDURE:

Turn the key to the OFF position, then disconnect all connectors from the module.

Press and hold the module's programming button and connect all the connectors back to the module. Wait, the module's LED will flash RED rapidly (this may take up to 10 seconds).

Release the programming button. Wait, the LED will turn solid GREEN for 2 seconds to show the reset was successful.

# NEED HELP?

 1 866 427-2999

 [maestro.support@idatalink.com](mailto:maestro.support@idatalink.com)

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unplug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue, green and red 2-pin connectors are not used.

## STEP 4

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 5

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 6

- Connect all the harnesses to the Maestro RR module then test your installation.

# TROUBLESHOOTING TABLE

PROBLEM	SOLUTION
Gauges do not work, radio shows OBD2 Error 1 or Error 2.	<p>Ensure OBDII connector is securely attached to the OBDII connector of the vehicle.</p> <p>If you hardwired connections at the OBDII, check connections at the OBDII connector. Make sure the <b>RED/BROWN</b> wire is on <b>PIN 6</b> and the <b>YELLOW/BROWN</b> wire is connected to <b>PIN 14</b> of the OBDII connector. Do not use T-Taps. Soldering or military splicing methods are recommended.</p> <p>If anything else is connected to the OBD2 or CAN wires of vehicle (programmer, throttle controller, insurance tracker, etc.) try unplugging it to see if gauges work. If gauges work without it installed, call tech support for options.</p> <p>Reset the RR.</p>
Backup camera is not displayed.	<p>If radio doesn't switch to camera input, ensure purple/white from the MA1 harness is connected to radio reverse input wire.</p> <p>If radio switches to blank image, verify yellow "BACK UP CAMERA" RCA is connected to the correct input. Most radios have a yellow "R CAM" or "CAM" input. Pioneer models may use a brown "BC IN" input. Make sure the 2-pin white connector is plugged into the MA1 T harness.</p>
Audio is very quiet or very loud.	<p><b>Non-amplified vehicles</b>, ensure the white and black 4-pin connectors remain plugged in together in the harness. The 4-pin RCA adapters are not used.</p> <p><b>Amplified vehicles</b>, ensure the 4-pin RCA connectors are used after separating the white and black 4-pin connectors on the MA1 harness. Plug them into the radio's RCA preouts.</p>
The light on the Maestro is flashing <b>RED ONCE</b> .	<p>There is no firmware on the module. Flash the RR module using Weblink Desktop and log in. Do NOT use DEMO MODE.</p>
The light on the Maestro is blinking <b>RED TWICE</b> and the radio <b>IS</b> turning on.	<p>Ensure the 4-pin data cable is connected between the radio and the RR, and that it is plugged into the black port on the Maestro RR. The red and blue ports on the RR should be empty.</p> <p>Make sure the correct radio model and serial number were entered during the flash. Verify the radio's serial number entered during the flash matches what is listed on the radio screen. This can be found in the settings of the radio, listed as Device Id, Device Number, or Serial Number.</p>
The light on the Maestro is blinking <b>RED TWICE</b> but the radio is <b>NOT</b> turning on.	<p>If installing a modular radio and it is not turning on, ensure the screen is secured and any trim pieces on the radio have been installed fully. Not installing these fully will prevent radio from powering up and show a 2x red error as well.</p> <p>Test red and yellow wires for DC voltage at radio using a multimeter. Contact support if no voltage on red or yellow.</p>

## MAESTRO RR RESET PROCEDURE:

Turn the key to the OFF position, then disconnect all connectors from the module.

Press and hold the module's programming button and connect all the connectors back to the module. Wait, the module's LED will flash RED rapidly (this may take up to 10 seconds).

Release the programming button. Wait, the LED will turn solid GREEN for 2 seconds to show the reset was successful.

# WELCOME

Congratulations on the purchase of your iDatalink Maestro RR Radio replacement solution. You are now a few simple steps away from enjoying your new car radio with enhanced features.

Before starting your installation, please ensure that your iDatalink Maestro module is programmed with the correct firmware for your vehicle and that you carefully review the install guide.

**Please note that Maestro RR will only retain functionalities that were originally available in the vehicle.**

 [maestro.support@idatalink.com](mailto:maestro.support@idatalink.com)

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- Connect the green MA1 connector to the red 2-pin connector. The blue, 2-pin connector is not used.

## STEP 4

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 5

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 6

- Connect all the harnesses to the Maestro RR module then test your installation.

- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue 2-pin connector is not used.

## STEP 4

- Plug the HRR-MA1 red connector to the green 2-pin connector.
- Cut and isolate the blue/red wire near the 24-pin connector. Connect the other end of the blue/red wire to PIN-F of the 28-pin Bluetooth module connector (refer to wiring diagram for details).

## STEP 5

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 6

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 7

- Connect all the harnesses to the Maestro RR module then test your installation.

# NEED HELP?

 1 866 427-2999

 [maestro.support@idatalink.com](mailto:maestro.support@idatalink.com)

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unplug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue, green and red 2-pin connectors are not used.

## STEP 4

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 5

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 6

- Connect all the harnesses to the Maestro RR module then test your installation.

# TROUBLESHOOTING TABLE

PROBLEM	SOLUTION
Gauges do not work, radio shows OBD2 Error 1 or Error 2.	<p>Ensure OBDII connector is securely attached to the OBDII connector of the vehicle.</p> <p>If you hardwired connections at the OBDII, check connections at the OBDII connector. Make sure the <b>RED/BROWN</b> wire is on <b>PIN 6</b> and the <b>YELLOW/BROWN</b> wire is connected to <b>PIN 14</b> of the OBDII connector. Do not use T-Taps. Soldering or military splicing methods are recommended.</p> <p>If anything else is connected to the OBD2 or CAN wires of vehicle (programmer, throttle controller, insurance tracker, etc.) try unplugging it to see if gauges work. If gauges work without it installed, call tech support for options.</p> <p>Reset the RR.</p>
Backup camera is not displayed.	<p>If radio doesn't switch to camera input, ensure purple/white from the MA1 harness is connected to radio reverse input wire.</p> <p>If radio switches to blank image, verify yellow "BACK UP CAMERA" RCA is connected to the correct input. Most radios have a yellow "R CAM" or "CAM" input. Pioneer models may use a brown "BC IN" input. Make sure the 2-pin white connector is plugged into the MA1 T harness.</p>
Audio is very quiet or very loud.	<p><b>Non-amplified vehicles</b>, ensure the white and black 4-pin connectors remain plugged in together in the harness. The 4-pin RCA adapters are not used.</p> <p><b>Amplified vehicles</b>, ensure the 4-pin RCA connectors are used after separating the white and black 4-pin connectors on the MA1 harness. Plug them into the radio's RCA preouts.</p>
The light on the Maestro is flashing <b>RED ONCE</b> .	<p>There is no firmware on the module. Flash the RR module using Weblink Desktop and log in. Do NOT use DEMO MODE.</p>
The light on the Maestro is blinking <b>RED TWICE</b> and the radio <b>IS</b> turning on.	<p>Ensure the 4-pin data cable is connected between the radio and the RR, and that it is plugged into the black port on the Maestro RR. The red and blue ports on the RR should be empty.</p> <p>Make sure the correct radio model and serial number were entered during the flash. Verify the radio's serial number entered during the flash matches what is listed on the radio screen. This can be found in the settings of the radio, listed as Device Id, Device Number, or Serial Number.</p>
The light on the Maestro is blinking <b>RED TWICE</b> but the radio is <b>NOT</b> turning on.	<p>If installing a modular radio and it is not turning on, ensure the screen is secured and any trim pieces on the radio have been installed fully. Not installing these fully will prevent radio from powering up and show a 2x red error as well.</p> <p>Test red and yellow wires for DC voltage at radio using a multimeter. Contact support if no voltage on red or yellow.</p>

## MAESTRO RR RESET PROCEDURE:

Turn the key to the OFF position, then disconnect all connectors from the module.

Press and hold the module's programming button and connect all the connectors back to the module. Wait, the module's LED will flash RED rapidly (this may take up to 10 seconds).

Release the programming button. Wait, the LED will turn solid GREEN for 2 seconds to show the reset was successful.

# WELCOME

Congratulations on the purchase of your iDatalink Maestro RR Radio replacement solution. You are now a few simple steps away from enjoying your new car radio with enhanced features.

Before starting your installation, please ensure that your iDatalink Maestro module is programmed with the correct firmware for your vehicle and that you carefully review the install guide.

**Please note that Maestro RR will only retain functionalities that were originally available in the vehicle.**

## TABLE OF CONTENTS

Installation Instructions	3
Wiring Diagram	4
Radio Wire Reference Chart	5
Module Diagnostics	6
Troubleshooting Table	7

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- Connect the green MA1 connector to the red 2-pin connector. The blue, 2-pin connector is not used.

## STEP 4

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 5

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 6

- Connect all the harnesses to the Maestro RR module then test your installation.

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue, green and red 2-pin connectors are not used.

## STEP 4

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 5

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

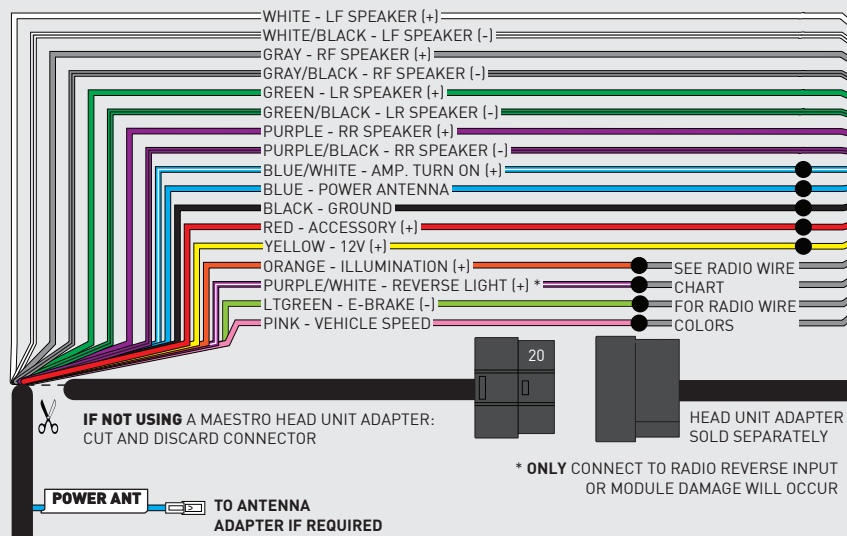

## STEP 6

- Connect all the harnesses to the Maestro RR module then test your installation.

Backup camera is not displayed.	<p>If radio doesn't switch to camera input, ensure purple/white from the MA1 harness is connected to radio reverse input wire.</p> <p>If radio switches to blank image, verify yellow "BACK UP CAMERA" RCA is connected to the correct input. Most radios have a yellow "R CAM" or "CAM" input. Pioneer models may use a brown "BC IN" input. Make sure the 2-pin white connector is plugged into the MA1 T harness.</p>
Audio is very quiet or very loud.	<p><b>Non-amplified vehicles</b>, ensure the white and black 4-pin connectors remain plugged in together in the harness. The 4-pin RCA adapters are not used.</p> <p><b>Amplified vehicles</b>, ensure the 4-pin RCA connectors are used after separating the white and black 4-pin connectors on the MA1 harness. Plug them into the radio's RCA preouts.</p>
The light on the Maestro is flashing <b>RED ONCE</b> .	<p>There is no firmware on the module. Flash the RR module using Weblink Desktop and log in. Do NOT use DEMO MODE.</p>
The light on the Maestro is blinking <b>RED TWICE</b> and the radio <b>IS</b> turning on.	<p>Ensure the 4-pin data cable is connected between the radio and the RR, and that it is plugged into the black port on the Maestro RR. The red and blue ports on the RR should be empty.</p> <p>Make sure the correct radio model and serial number were entered during the flash. Verify the radio's serial number entered during the flash matches what is listed on the radio screen. This can be found in the settings of the radio, listed as Device Id, Device Number, or Serial Number.</p>
The light on the Maestro is blinking <b>RED TWICE</b> but the radio is <b>NOT</b> turning on.	<p>If installing a modular radio and it is not turning on, ensure the screen is secured and any trim pieces on the radio have been installed fully. Not installing these fully will prevent radio from powering up and show a 2x red error as well.</p> <p>Test red and yellow wires for DC voltage at radio using a multimeter. Contact support if no voltage on red or yellow.</p>

## MAESTRO RR RESET PROCEDURE:

Turn the key to the OFF position, then disconnect all connectors from the module.

Press and hold the module's programming button and connect all the connectors back to the module. Wait, the module's LED will flash RED rapidly (this may take up to 10 seconds).

Release the programming button. Wait, the LED will turn solid GREEN for 2 seconds to show the reset was successful.

# WELCOME

Congratulations on the purchase of your iDatalink Maestro RR Radio replacement solution. You are now a few simple steps away from enjoying your new car radio with enhanced features.

Before starting your installation, please ensure that your iDatalink Maestro module is programmed with the correct firmware for your vehicle and that you carefully review the install guide.

**Please note that Maestro RR will only retain functionalities that were originally available in the vehicle.**

 [maestro.support@idatalink.com](mailto:maestro.support@idatalink.com)

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue 2-pin connector is not used.

## STEP 4

- Plug the HRR-MA1 red connector to the green 2-pin connector.
- Cut and isolate the blue/red wire near the 24-pin connector. Connect the other end of the blue/red wire to PIN-K of the 28-pin Bluetooth module connector (refer to wiring diagram for details).

## STEP 5

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 6

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 7

- Connect all the harnesses to the Maestro RR module then test your installation.

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue 2-pin connector is not used.

## STEP 4

- Plug the HRR-MA1 red connector to the green 2-pin connector.
- Cut and isolate the blue/red wire near the 24-pin connector. Connect the other end of the blue/red wire to PIN-K of the 28-pin Bluetooth module connector (refer to wiring diagram for details).

## STEP 5

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 6

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

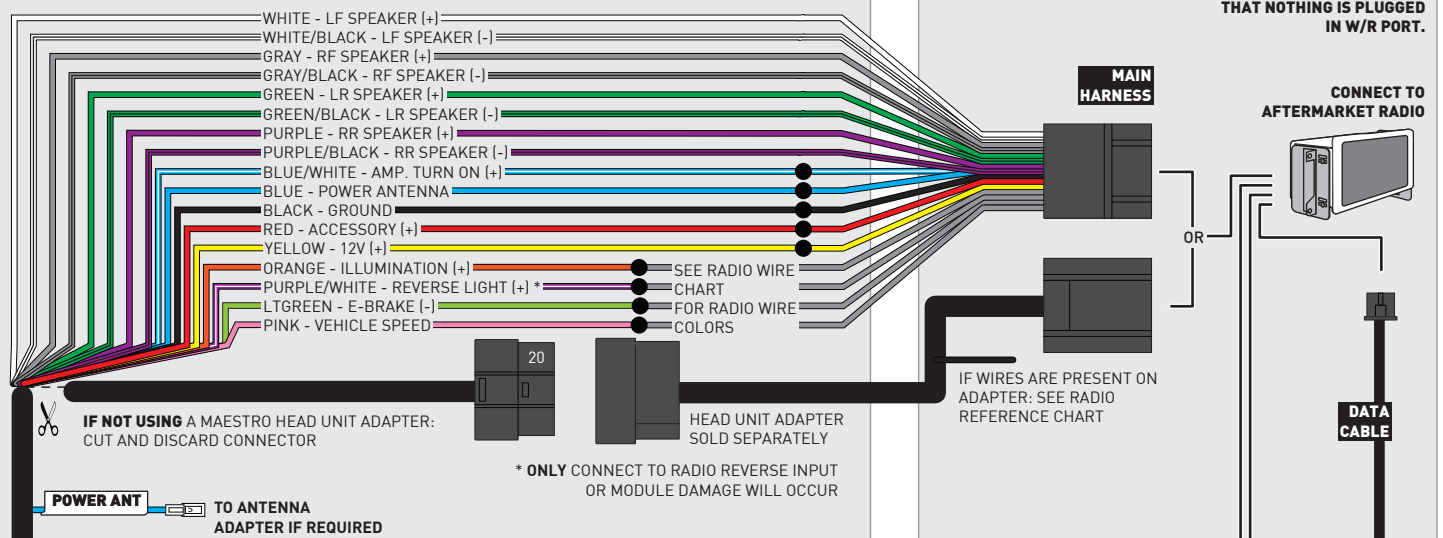

## STEP 7

- Connect all the harnesses to the Maestro RR module then test your installation.

# TROUBLESHOOTING TABLE

PROBLEM	SOLUTION
Gauges do not work, radio shows OBD2 Error 1 or Error 2.	Ensure OBDII connector is securely attached to the OBDII connector of the vehicle. If you hardwired connections at the OBDII, check connections at the OBDII connector. Make sure the <b>RED/BROWN</b> wire is on <b>PIN 6</b> and the <b>YELLOW/BROWN</b> wire is connected to <b>PIN 14</b> of the OBDII connector. Do not use T-Taps. Soldering or military splicing methods are recommended. If anything else is connected to the OBD2 or CAN wires of vehicle (programmer, throttle controller, insurance tracker, etc.) try unplugging it to see if gauges work. If gauges work without it installed, call tech support for options. Reset the RR.
Backup camera is not displayed.	If radio doesn't switch to camera input, ensure purple/white from the MA1 harness is connected to radio reverse input wire. If radio switches to blank image, verify yellow "BACK UP CAMERA" RCA is connected to the correct input. Most radios have a yellow "R CAM" or "CAM" input. Pioneer models may use a brown "BC IN" input. Make sure the 2-pin white connector is plugged into the MA1 T harness.
Audio is very quiet or very loud.	<b>Non-amplified vehicles</b> , ensure the white and black 4-pin connectors remain plugged in together in the harness. The 4-pin RCA adapters are not used. <b>Amplified vehicles</b> , ensure the 4-pin RCA connectors are used after separating the white and black 4-pin connectors on the MA1 harness. Plug them into the radio's RCA preouts.
The light on the Maestro is flashing <b>RED ONCE</b> .	There is no firmware on the module. Flash the RR module using Weblink Desktop and log in. Do NOT use DEMO MODE.
The light on the Maestro is blinking <b>RED TWICE</b> and the radio <b>IS</b> turning on.	Ensure the 4-pin data cable is connected between the radio and the RR, and that it is plugged into the black port on the Maestro RR. The red and blue ports on the RR should be empty.  Make sure the correct radio model and serial number were entered during the flash. Verify the radio's serial number entered during the flash matches what is listed on the radio screen. This can be found in the settings of the radio, listed as Device Id, Device Number, or Serial Number.
The light on the Maestro is blinking <b>RED TWICE</b> but the radio is <b>NOT</b> turning on.	If installing a modular radio and it is not turning on, ensure the screen is secured and any trim pieces on the radio have been installed fully. Not installing these fully will prevent radio from powering up and show a 2x red error as well. Test red and yellow wires for DC voltage at radio using a multimeter. Contact support if no voltage on red or yellow.

## MAESTRO RR RESET PROCEDURE:

Turn the key to the OFF position, then disconnect all connectors from the module.

Press and hold the module's programming button and connect all the connectors back to the module. Wait, the module's LED will flash RED rapidly (this may take up to 10 seconds).

Release the programming button. Wait, the LED will turn solid GREEN for 2 seconds to show the reset was successful.

# WELCOME

Congratulations on the purchase of your iDatalink Maestro RR Radio replacement solution. You are now a few simple steps away from enjoying your new car radio with enhanced features.

Before starting your installation, please ensure that your iDatalink Maestro module is programmed with the correct firmware for your vehicle and that you carefully review the install guide.

**Please note that Maestro RR will only retain functionalities that were originally available in the vehicle.**

## TABLE OF CONTENTS

Installation Instructions	3
Wiring Diagram	4
Radio Wire Reference Chart	5
Module Diagnostics	6
Troubleshooting Table	7

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue 2-pin connector is not used.

## STEP 4

- Plug the HRR-MA1 red connector to the green 2-pin connector.
- Cut and isolate the blue/red wire near the 24-pin connector. Connect the other end of the blue/red wire to PIN-F of the 28-pin Bluetooth module connector (refer to wiring diagram for details).

## STEP 5

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 6

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 7

- Connect all the harnesses to the Maestro RR module then test your installation.

# TROUBLESHOOTING TABLE

PROBLEM	SOLUTION
Gauges do not work, radio shows OBD2 Error 1 or Error 2.	Ensure OBDII connector is securely attached to the OBDII connector of the vehicle. If you hardwired connections at the OBDII, check connections at the OBDII connector. Make sure the <b>RED/BROWN</b> wire is on <b>PIN 6</b> and the <b>YELLOW/BROWN</b> wire is connected to <b>PIN 14</b> of the OBDII connector. Do not use T-Taps. Soldering or military splicing methods are recommended. If anything else is connected to the OBD2 or CAN wires of vehicle (programmer, throttle controller, insurance tracker, etc.) try unplugging it to see if gauges work. If gauges work without it installed, call tech support for options. Reset the RR.
Backup camera is not displayed.	If radio doesn't switch to camera input, ensure purple/white from the MA1 harness is connected to radio reverse input wire. If radio switches to blank image, verify yellow "BACK UP CAMERA" RCA is connected to the correct input. Most radios have a yellow "R CAM" or "CAM" input. Pioneer models may use a brown "BC IN" input. Make sure the 2-pin white connector is plugged into the MA1 T harness.
Audio is very quiet or very loud.	<b>Non-amplified vehicles</b> , ensure the white and black 4-pin connectors remain plugged in together in the harness. The 4-pin RCA adapters are not used. <b>Amplified vehicles</b> , ensure the 4-pin RCA connectors are used after separating the white and black 4-pin connectors on the MA1 harness. Plug them into the radio's RCA preouts.
The light on the Maestro is flashing <b>RED ONCE</b> .	There is no firmware on the module. Flash the RR module using Weblink Desktop and log in. Do NOT use DEMO MODE.
The light on the Maestro is blinking <b>RED TWICE</b> and the radio <b>IS</b> turning on.	Ensure the 4-pin data cable is connected between the radio and the RR, and that it is plugged into the black port on the Maestro RR. The red and blue ports on the RR should be empty.  Make sure the correct radio model and serial number were entered during the flash. Verify the radio's serial number entered during the flash matches what is listed on the radio screen. This can be found in the settings of the radio, listed as Device Id, Device Number, or Serial Number.
The light on the Maestro is blinking <b>RED TWICE</b> but the radio is <b>NOT</b> turning on.	If installing a modular radio and it is not turning on, ensure the screen is secured and any trim pieces on the radio have been installed fully. Not installing these fully will prevent radio from powering up and show a 2x red error as well. Test red and yellow wires for DC voltage at radio using a multimeter. Contact support if no voltage on red or yellow.

## MAESTRO RR RESET PROCEDURE:

Turn the key to the OFF position, then disconnect all connectors from the module.

Press and hold the module's programming button and connect all the connectors back to the module. Wait, the module's LED will flash RED rapidly (this may take up to 10 seconds).

Release the programming button. Wait, the LED will turn solid GREEN for 2 seconds to show the reset was successful.

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unlug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- Connect the green HRR-MA1 connector to the blue 2-pin connector. The red, 2-pin connector is not used.

## STEP 4

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 5

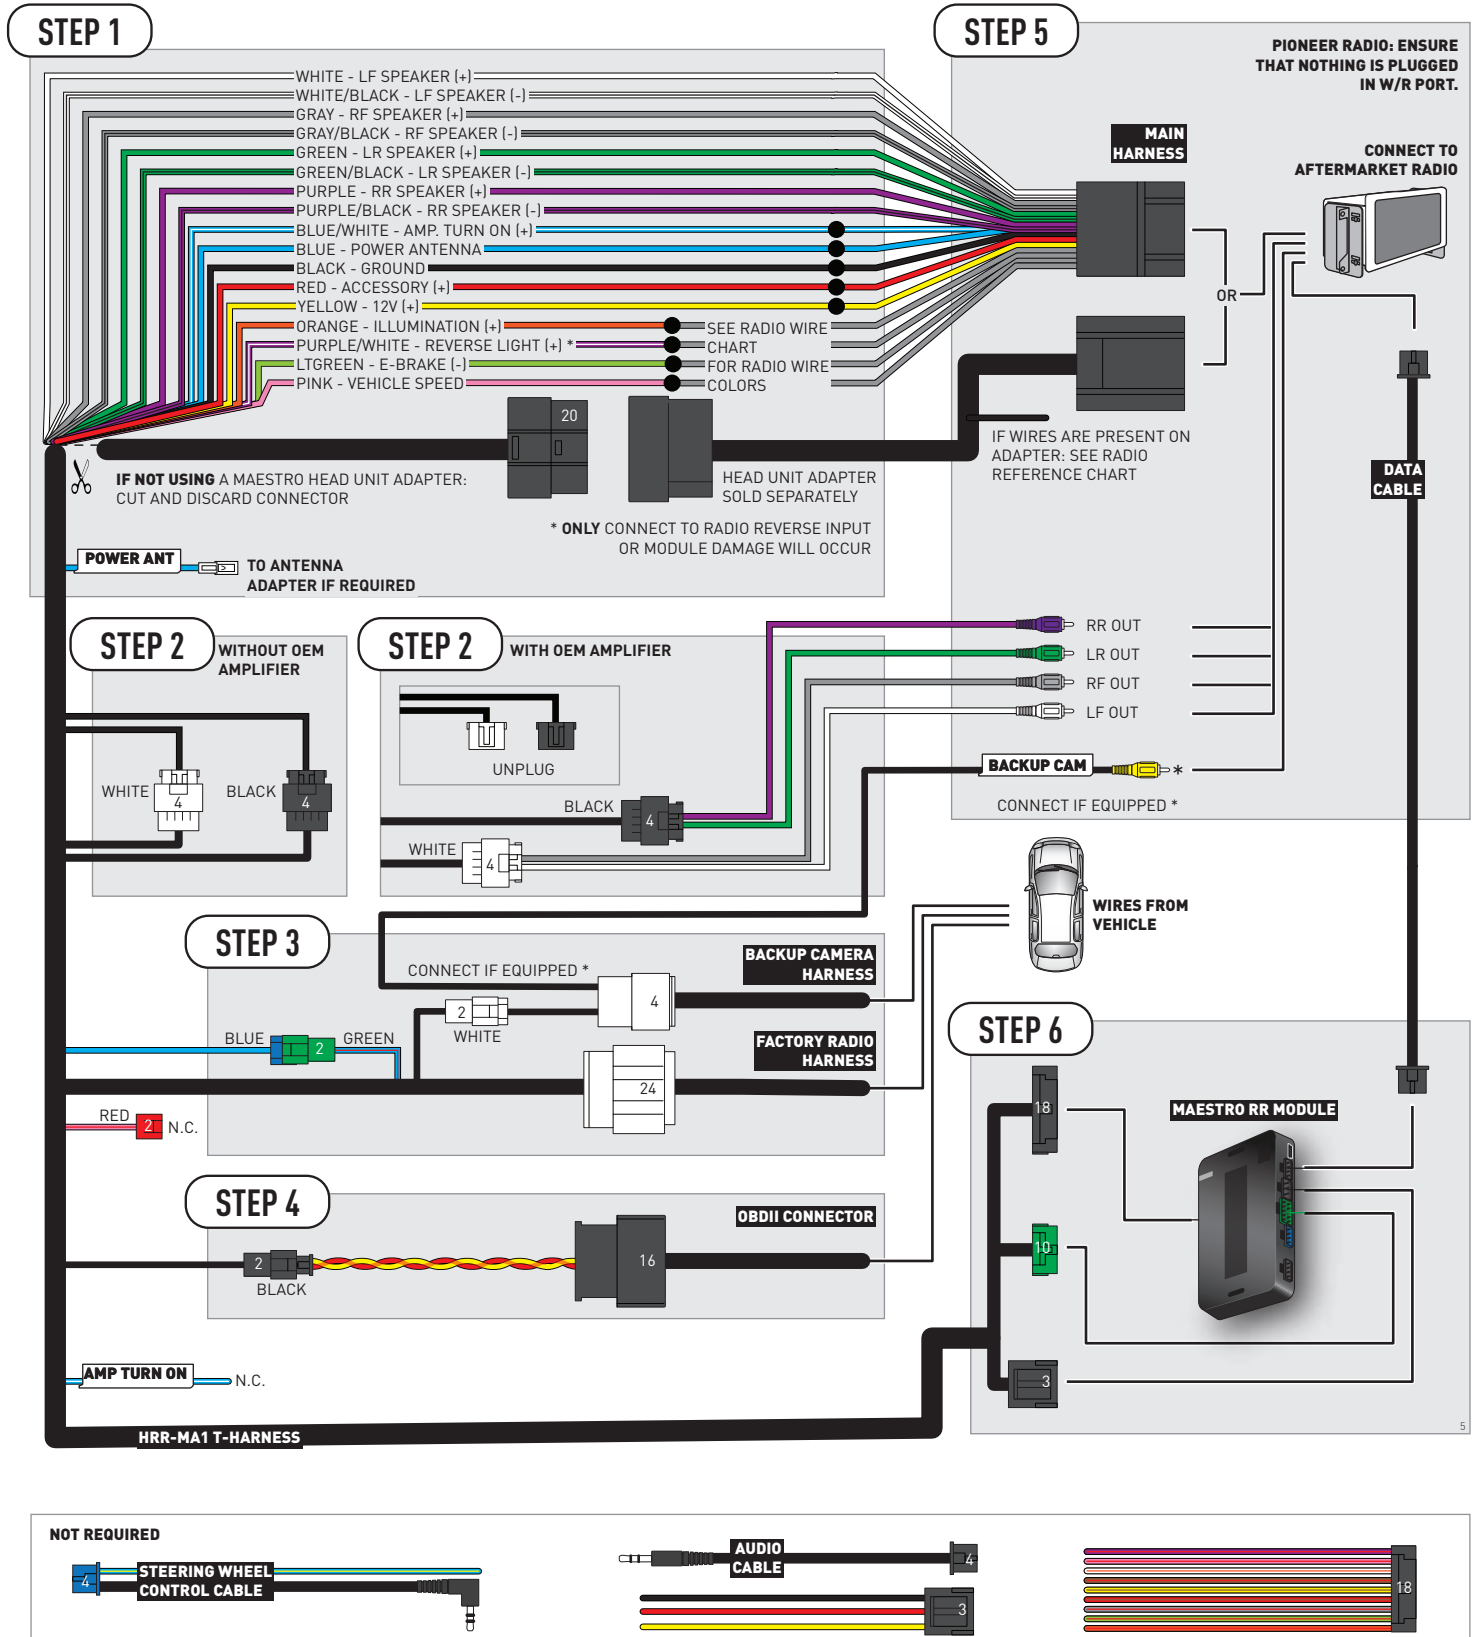

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 6

- Connect all the harnesses to the Maestro RR module then test your installation.

HEAD UNIT ADAPTER:  
ACC-HU-PI01, SON1, KEN1, KEN2, ALP1

# WELCOME

Congratulations on the purchase of your iDatalink Maestro RR Radio replacement solution. You are now a few simple steps away from enjoying your new car radio with enhanced features.

Before starting your installation, please ensure that your iDatalink Maestro module is programmed with the correct firmware for your vehicle and that you carefully review the install guide.

**Please note that Maestro RR will only retain functionalities that were originally available in the vehicle.**

# INSTALLATION INSTRUCTIONS P1/1

## STEP 1

Remove the factory radio

**If using head unit adapter (sold separately), connect HRR-MA1 harness to adapter and skip to step 2.**

- Unbox the aftermarket radio and locate its main harness.
- Cut and remove the black 20 pin connector from the HRR-MA1 T-harness and connect the wires, shown in the wiring diagram, from aftermarket radio main harness to the HRR-MA1 T-harness and match the wire functions.

**Note:** only connect purple/white wire to radio reverse input or module damage will occur.

- Connect the blue POWER ANT terminal to amplified antenna adapter (if required).

## STEP 2

- Determine if the vehicle has a factory amplifier. Look for badges on the radio, door panels and dash that indicate the presence of an amplifier (ex: BOSE).

**If the vehicle DOES NOT have a factory amplifier:**

- Leave the HRR-MA1 4-pin white and 4-pin black connectors together. The included 4-pin white and black connectors with RCAs are not used .

**If the vehicle DOES have a factory amplifier:**

- Unplug the HRR-MA1 4-pin white and 4-pin black connectors.
- Connect the HRR-MA1 4-pin white to 4-pin white connector with RCAs. Connect the 4-pin black to 4-pin black connector with RCAs.
- Connect the RCAs to the radio outputs: white/left front, gray/right front, green/left rear, purple/right rear.

## STEP 3

- If equipped with backup camera, plug the white MA1 4-pin cable to the vehicle backup camera harness. Connect the 2-pin white connector to HRR-MA1 main harness 2-pin white connector.
- Connect the factory radio harness to the HRR-MA1 T-harness.
- The blue, green and red 2-pin connectors are not used.

## STEP 4

- Plug the BLACK 2-pin connector of your HRR-MA1 T-harness into the OBDII MA1 cable.
- Plug the OBDII connector into the OBDII of the vehicle.

## STEP 5

- Plug the harnesses into the aftermarket radio.
- Connect the backup cam cable into the aftermarket radio (if equipped).
- Plug the antenna adapter (if required).
- Plug the Data cable to the data port of the aftermarket radio.

**Note:** On Pioneer radio, ensure that there is nothing plugged into the W/R port.

## STEP 6

- Connect all the harnesses to the Maestro RR module then test your installation.

# TROUBLESHOOTING TABLE

PROBLEM	SOLUTION
Gauges do not work, radio shows OBD2 Error 1 or Error 2.	<p>Ensure OBDII connector is securely attached to the OBDII connector of the vehicle.</p> <p>If you hardwired connections at the OBDII, check connections at the OBDII connector. Make sure the <b>RED/BROWN</b> wire is on <b>PIN 6</b> and the <b>YELLOW/BROWN</b> wire is connected to <b>PIN 14</b> of the OBDII connector. Do not use T-Taps. Soldering or military splicing methods are recommended.</p> <p>If anything else is connected to the OBD2 or CAN wires of vehicle (programmer, throttle controller, insurance tracker, etc.) try unplugging it to see if gauges work. If gauges work without it installed, call tech support for options.</p> <p>Reset the RR.</p>
Backup camera is not displayed.	<p>If radio doesn't switch to camera input, ensure purple/white from the MA1 harness is connected to radio reverse input wire.</p> <p>If radio switches to blank image, verify yellow "BACK UP CAMERA" RCA is connected to the correct input. Most radios have a yellow "R CAM" or "CAM" input. Pioneer models may use a brown "BC IN" input. Make sure the 2-pin white connector is plugged into the MA1 T harness.</p>
Audio is very quiet or very loud.	<p><b>Non-amplified vehicles</b>, ensure the white and black 4-pin connectors remain plugged in together in the harness. The 4-pin RCA adapters are not used.</p> <p><b>Amplified vehicles</b>, ensure the 4-pin RCA connectors are used after separating the white and black 4-pin connectors on the MA1 harness. Plug them into the radio's RCA preouts.</p>
The light on the Maestro is flashing <b>RED ONCE</b> .	<p>There is no firmware on the module. Flash the RR module using Weblink Desktop and log in. Do NOT use DEMO MODE.</p>
The light on the Maestro is blinking <b>RED TWICE</b> and the radio <b>IS</b> turning on.	<p>Ensure the 4-pin data cable is connected between the radio and the RR, and that it is plugged into the black port on the Maestro RR. The red and blue ports on the RR should be empty.</p> <p>Make sure the correct radio model and serial number were entered during the flash. Verify the radio's serial number entered during the flash matches what is listed on the radio screen. This can be found in the settings of the radio, listed as Device Id, Device Number, or Serial Number.</p>
The light on the Maestro is blinking <b>RED TWICE</b> but the radio is <b>NOT</b> turning on.	<p>If installing a modular radio and it is not turning on, ensure the screen is secured and any trim pieces on the radio have been installed fully. Not installing these fully will prevent radio from powering up and show a 2x red error as well.</p> <p>Test red and yellow wires for DC voltage at radio using a multimeter. Contact support if no voltage on red or yellow.</p>

## MAESTRO RR RESET PROCEDURE:

Turn the key to the OFF position, then disconnect all connectors from the module.

Press and hold the module's programming button and connect all the connectors back to the module. Wait, the module's LED will flash RED rapidly (this may take up to 10 seconds).

Release the programming button. Wait, the LED will turn solid GREEN for 2 seconds to show the reset was successful.
